

ZT-2017

Wireless 8-channel Analog Input Module with High Voltage Protection

Introduction

The ZT-2017 is a wireless 16-bit, 8-channel differential analog input ZigBee module that provides a programmable input range on all analog channels (± 150 mV, ± 500 mV, ± 1 V, ± 5 V or ± 10 V). Each analog channel can be configured for an individual input range and has a high 240 Vrms overvoltage protection. Users can easily configure the module address, protocol, checksum, ZT-PID, ZT-channel and type code settings using a combination of rotary and DIP switches.
